Course Information

Chris Free, Gianna Cacciatore, Nik Medina

What is the purpose?

- Have you ever wanted to know more about a class besides the few sentences in the course description?
    - While meeting with professor Older about next semester classes, she mentioned some electives and classes that sounded interesting, but the course description wasn't enough for me to decide
    - I mentioned that it would be nice if there was a syllabus or something on myslice when registering for classes to find out more about the course before registering
    - She said that it would be too much, since the system is already slow
    - A course website where professors can login and upload and information they want to share about a course(syllabus, projects, pictures, videos)
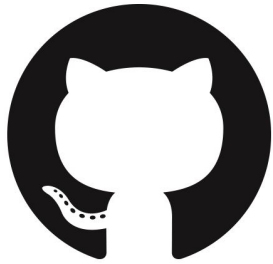

Who is the audience?

Students!

- Imagine being able to search up any class at SU and have access to a relevant syllabus, course projects, and any relevant information about the course before registering

- This is what our website wants to help you with

- Don't waste your credits on classes you might not like or are not that interested in ever again

Who is the audience? (Cont.)

Professors as well!

- No more emails from students asking for syllabi for your future course!

- A place to send your advisees who are curious about classes to take or what a class entails

- One place where you can keep track of all your courses and syllabi instead of keeping them in various folders and areas on your computer!

Tech Stack

Faculty Portion

- Once logged in, the professor has a form where they can add a new class which includes links, documents, and photos!

- This is so that they can attach a syllabus, photos of previous students projects, links to their websites, really whatever they think might be useful to students.

- They will have a course list where they can go into each course and update/edit or delete information

Course List

- CSE 389
- CIS 400

Student Portion

- Student portion only has access to viewing posted class

- Students can search up classes through a search bar to ensure easy look up

- Students can see with each class post a class' title, course code, teacher, syllabus, and any extra documents, links, or pictures the teacher may have wanted to include about the course but couldn't

Student Portion

- Can view courses that are popular and that other students have viewed that might be good for them to take

- Can also view classes by department in case they need something specific for their major and want to learn more about what they entail

Welcome!
